

ABSTRACT OF THE DISCLOSURE

A mobile communication terminal for selecting a hyperlinked phrase or image in an HTML document, and a method for displaying an HTML document on a mobile communication terminal. The method comprises: wirelessly accessing the Web to receive an HTML document; recognizing hyperlink tags included in the HTML document; assigning different identification numbers to respective website addresses of hyperlinked elements according to said hyperlink tags; displaying the HTML document with said identification numbers inserted into the positions at which corresponding hyperlinked elements are displayed; and accessing a hyperlinked address, which is assigned an identification number corresponding to a number key inputted by a user, among said addresses of hyperlinked elements. The user can access the website address of a hyperlinked phrase or image in an HTML document by pressing a number key corresponding to the identification number assigned to the hyperlinked phrase or image.
